SEAGAS Team Update: 12 November 2026

Sprint 3 meeting with the lecturer, and the work done before and after it (evening of 11 Nov to 12 Nov). Prepared by Soh Way Miin (Carl) for the Group 10 team. Branch: **dev** (all changes pushed).

1. At a glance

Sprint 3 meeting	Demonstrated the system to the lecturer on 12 Nov 2026 with three new demo students (Cybersecurity, ICT Web and Mobile, Business Marketing). Feedback below (section 2).
Lecturer feedback	8 points (F01 to F08). Done today: F01, F02, F04, F07, F08. Partly done: F03, F05. Not started: F06.
Added	Year filter and readiness per student for advisors; new Needs Support rules; MQF / COPPA link with a drill-down view; required-skill reminder; completion pop-up with skill level choice; clickable dashboard cards; university logos; home-page backgrounds.
Fixed	Frontend window closing at once in start_all.bat; readiness chart on same-day assessments; white text on Change Password; 'How is this calculated?' in the printed report; plus smaller layout fixes.
Tests	Backend test suite: 331 passed, 1 skipped. Frontend builds; lint shows no new errors.

2. Lecturer feedback (Sprint 3 meeting, 12 Nov) and status

ID	Feedback	Status	What was done / where
F01	Advisors filter students by Year 1, Year 2 ...	Done	Year filter and sortable Year column in Advisor Dashboard → Students.
F02	Advisor can see each student's readiness score	Done	Student list shows the latest score with the assessed role, the status and its reason; overview cards open the matching students.
F03	Readiness score usable internationally	In progress	Formula is country-neutral; levels are settings; skills linked to MQF clusters, and MQF is referenced to the ASEAN framework (AQRF). docs/JOB_READINESS_SCORE.md section 4. Still to do: job descriptions from other countries and a cross-market check.
F04	Required skills count more than preferred and bonus	Done	Recommendations grouped Required → Preferred → Bonus with the 70/25/5 weights; reminder before starting a non-required activity while required skills are untouched (backend ordering: Yong Hin, PR #28).
F05	Recommendations in more detail	Partly	Importance, gap type and 'up to +X points' shown. Still missing: why the skill matters for the role, current → expected level.
F06	Larger dataset	Not started	To plan with Yong Hin (section 6).
F07	INTI and Swinburne logos near SEAGAS	Done	Home and sign-in: rocket + Seagas × Swinburne × INTI. Portal sidebars: INTI × SWINBURNE × COS40005.
F08	MQA referencing and MQA COPPA	Done (first version)	MQF cluster view for advisors and documentation of MQF, AQRF referencing and the COPPA standards SEAGAS gives evidence for.

3. What we added

3.1 Who needs support: status by year of study and recent activity

A low score alone no longer means Needs Support. A new Year 1 student naturally has few skills, so under the old single 40% limit almost every first-year student was flagged and the students who really needed help were hidden. The status now compares the latest score with what is expected for the student's year and keeps Needs Support for students who are also inactive (backend/student_status.py).

Status	Rule
On Track	Score at or above the year's On Track level

Status	Rule
Developing	Between the year's two levels
Getting Started	Below the lower level, a Year 1 student whose account is younger than 120 days
Improving	Below the lower level, but an activity in the last 30 days or the score went up
Needs Support	Below the lower level, not a new Year 1 student and no activity in the last 30 days
Not Assessed	No assessment yet

Year of study	Year 1	Year 2	Year 3	Year 4+ / not set
On Track from	45%	55%	65%	70%
Below expected under	20%	30%	35%	40%

- Every status comes with its reason (student list, CSV export, student page), e.g. "Below 35% (expected for Year 3) and no learning activity in the last 30 days."
- Levels, the 30-day window and the 120-day period are System Settings (Admin → System Settings).
- On the current data (5,012 students) Needs Support falls from 1,221 to 776, and in Year 1 from 275 to 27. The score itself does not change.

3.2 MQF clusters, AQRF referencing and COPPA (F03, F08)

- backend/mqf.py links every skill to its main MQF 2nd-edition learning-outcome cluster (1, 2, 3a to 3f, 4, 5).
- Advisor → Skill Gaps → **View by MQF learning-outcome cluster**: gap share per cluster; click a cluster to see every skill; click a skill to see the students behind Gap / Developing / Strong; click a student to open the record.
- docs/JOB_READINESS_SCORE.md section 4 rewritten from the MQF 2024 circular, COPPA 2nd edition (2017) and the 2019 AQRF referencing report, including a table of COPPA standards SEAGAS gives evidence for (1.1.4, 1.1.5, 1.3.6, 3.3.4, 3.3.5, 6.1.6, 7.1.6).
- **Finding:** no job-role template asks for an Ethics and professionalism skill (MQF cluster 5), so that cluster has no data.

3.3 Advisor portal

- Overview cards open exactly what they count (Students, Assessed, Avg Readiness, Needs Support, Activities Completed).
- Learning Progress cards each open their own list; activity lists are grouped by student (count first, click to unfold).
- Student page: search and status filter for Development Activities; skill lists in tidy aligned grids (A–Z, level dots lined up, legend).
- New APIs: /api/advisor/cohort/activities, /cohort/mqf-clusters, /cohort/skill-students.

3.4 Student portal

- Recommendations grouped Required → Preferred → Bonus with a banner showing the weights and how many skills of each are left (F04).
- Completing an activity with evidence shows a Congratulations pop-up: a new skill is added at the activity's level; for a skill the student already has, the student chooses whether to raise its level (new API /api/progress/{id}/raise-skill).
- Progress page lists only the activities of the role being analysed.

3.5 Branding and home page

- Rocket + Seagas × Swinburne logo × INTI logo on the home navbar and sign-in pages (university logos hidden on phones).
- Animated, motion-safe backgrounds per home-page section; all three audience cards open; livelier final call-to-action.

4. What we fixed

Problem	Cause	Fix
start_all.bat opened only two windows; the frontend window closed at once	With only the file name, cmd in the new window could not find start_frontend.bat in a folder with a Chinese name (the OneDrive Desktop)	Scripts started by full path; Vite cache cleared on start; npm install runs every start
Readiness chart showed the same score for every point on one day	Points were keyed by date, so same-day assessments collapsed into one	Points keyed by assessment order; tooltip shows date and time
Recommendation for a skill kept showing after completing it	An existing low-level skill was not raised and nothing confirmed it	Completion pop-up with level choice; completed skills listed separately
White password-rule text on Change Password	Colour left over from the old dark theme	Grey / green rule text
'How is this calculated?' printed in the student report	Not marked as screen-only	Hidden when printing

5. For the team: updating your copy

- **git pull** on dev, then double-click **start_all.bat**: three windows open (start_all, SEAGAS Backend, SEAGAS Frontend).
- First run needs internet: npm installs the new font package and the NLP model loads; wait for "NLP model loaded (hybrid ready)".
- No database changes are needed by hand: start_backend.bat runs the migration (personal email now optional; new settings use their defaults).
- If the browser still shows the old pages, press Ctrl + F5.

6. Next steps and owners (to confirm in ClickUp)

Task	Owner (suggested)	Notes
F05 Detailed recommendations: why the skill matters, current → expected level	Aaron, Carl	S3-03-08
F06 Larger dataset; add an Ethics and professionalism skill to role templates	Yong Hin, Carl	S3-05-05; MQF cluster 5 finding
F03 Cross-market check with job descriptions from other countries	Yong Hin, Aaron	S3-03-03; Spearman ρ as in the sensitivity analysis
Performance testing: assessment response time with measured numbers	Carl	S3-06
SUS usability test and UAD student evaluation	All	Not yet in the backlog
Sprint 3 report, peer and self-assessment, poster, demo video	All	S3-08, S3-09
Replace the Gmail App Password (shared during setup)	Carl	Before any further demo
Review the MQF skill mapping (backend/mqf.py) with the team	All	Our own preliminary mapping

Commits of the day (dev): 0369d3c start script fix · e2b909d completion pop-up and raise-skill · 233ac08 progress per role · 3fc1eef home backgrounds · f83debb Sprint 3 feedback (Needs Support, required-skill reminder, advisor views, logos) · 8010cf1 MQF clusters, MQA referencing and COPPA. Interface work merged this week: Shanice's student interface (PR #30), Ren Hang's advisor and admin theming (feature/UIUX), Yong Hin's learning-resource link fixes (PR #29).
