SEAGAS - Team Update: What Is Done, What Is Left, What To Do Next

From Carl (Soh Way Miin), Backend Developer, to Group 10 | 26 October 2026
COS40005 Computing Technology Project A | POC004

In short: every student now has a 9-digit **student ID**, and students no longer sign up themselves: advisors upload new-student lists, admins create the accounts, and each student gets a temporary password they must change at first sign-in. Recommendations are now split into **Free / Free to learn / Paid** tabs. After you pull, run **start_all.bat** once. The test student now also needs its student ID: `student0001@synthetic.example.com` / `900000001` / `Seagas@2026`.

Note: these changes were pushed straight to dev, without a pull request. The sign-up page was removed and the login page changed, so please look at the parts that touch your work and tell Carl about anything that looks wrong.

1. What Is Done (26 October)

1.1 Student IDs and how student accounts are created

1. Advisor
Uploads the new-student list on **New Students** (Excel or CSV: Full Name, Phone Number, Personal Email).

2. Admin
On **Student Intake**: suggests a student ID and school email for each student (editable), rejects any that should not get an account, creates the accounts.

3. Email
Each student's personal email gets the student ID, school email and a temporary password.

4. Student
Signs in with school email + student ID + temporary password, then must choose a new password.

Area	What changed
Student ID	9 digits, e.g. 105967029. Every student account must have one (the database refuses a student without it, and staff accounts cannot have one). The 5,000 synthetic students got `900000001` - `900005000` (student N = 900000000 + N), the same in everyone's database. New IDs are suggested from 107000001. Shown and searchable in Admin User Management and the advisor student list and detail page; read-only on the student's My Profile.
No more sign-up	The Register page, the "Create an account" buttons and `POST /api/auth/register` are gone. The Home page has one "Sign in" button.
New Students (advisor)	Upload .xlsx or .csv (max 1,000 rows, 2 MB; a template can be downloaded). Rows with a bad email, a duplicate in the same file, or a person already on an earlier list are skipped with the reason. Advisors see the status of each student they uploaded.
Student Intake (admin)	All uploaded lists. Suggest student IDs, edit an ID or school email (format and duplicates are checked), reject a student, and create the accounts for the whole list. A second tab, **Email outbox**, shows every notification email.
Emails	There is no mail server yet, so emails are **stored, not sent**: the admin opens them in the Email outbox and passes the details on. Real sending works once `SMTP_HOST`, `SMTP_PORT`, `SMTP_USER`, `SMTP_PASSWORD` and `SMTP_FROM` are added to `backend/.env` (never commit them).

Sign-in	Students enter email, student ID and password; advisors and admins leave Student ID empty. A wrong ID gives the same message as a wrong password.
Temporary passwords	A new student, an admin password reset, and an advisor/admin account created by an admin all start with a temporary password. Until it is changed, the account sees only the "Choose your password" page and the backend refuses every other request. The temporary password is not asked again on that page.
Password rules	Every new password needs at least 8 characters with an uppercase letter, a lowercase letter, a number and a symbol (live checklist on the page). Existing passwords keep working; system-generated temporary passwords follow the rules.

1.2 Recommendations by cost

Each resource now has a cost tier: **Free** (cost "Free", 144 resources), **Free to learn** (learning is free, the certificate or extras cost money: "Free to audit", "Free tier", "Free / $14/mo" ..., 73) and **Paid** (prices, "Paid", "Low cost" and "Free trial", about 82). The Recommendations page shows one tier at a time with **Free selected by default**, grouped Technical → AI / Digital → Analytical → Soft skills. Within each skill, the engine also puts free resources first.

1.3 Database changes

Change	Why
`users.student_number`, `users.must_change_password`	Student ID; temporary-password flag. A trigger gives every new student row an ID, so the synthetic seed file and the generator need no change.
`student_intake_batches`, `student_intake_rows`	Uploaded lists and their students. Personal email and phone are only stored here, to send the account email.
`email_outbox`	Every notification email and whether it was sent.

All of it is in both `schema.sql` and `migrate_existing_db.sql`; start_backend.bat applies it. New Python package: `openpyxl` (reads Excel), installed by the start script. Tests: 71 pass (`python -m pytest tests -q`).

2. What To Do Next

2.1 After you pull (every member)

1. `git checkout dev`, `git pull`, then double-click **start_all.bat**. It installs openpyxl, gives every student in your database a student ID and creates the new tables.
2. Sign in again if the site logs you out. Test student: `student0001@synthetic.example.com`, Student ID `900000001`, password `Seagas@2026`. Advisors and admins sign in as before.
3. Try the flow: as an advisor, **New Students** → download the template → add 2-3 made-up students → upload. As an admin, **Student Intake** → open the list → Suggest student IDs → Create accounts → **Email outbox** → open an email. Sign in as that student and choose a password.
4. Use only made-up names, phone numbers and emails (NFR-05).

2.2 Before your next push

1. Pull dev first and merge it into your branch. These files changed a lot:

File	Most likely affects
`frontend/src/pages/Login.jsx`, `App.jsx`; `Register.jsx` **deleted**	Ren Hang, Shanice
`frontend/src/pages/Recommendations.jsx`, `recommendation/engine.py`	Aaron, Ren Hang
`backend/routers/auth.py`, `admin.py`, `advisor.py`; new `intake.py`	Anyone changing the backend

`database/schema.sql`, `migrate_existing_db.sql`	Yong Hin, Carl

2. Do not add a sign-up page back: student accounts come from Student Intake. In tests or SQL, inserting a student into `users` gives it an ID automatically.
3. Anything that logs a student in (scripts, tests, demos) must send `student_id` as well.
4. Run the tests and `npx vite build`; push through a pull request, commit messages in English.

3. What Is Still Left

3.1 Tasks

Owner	Task	When
Carl	**Send real emails**: choose a mail account / SMTP service and add the settings to `.env` (not git); a "resend email" button for the admin. Advisor report export, readiness histogram, cohort progress view; work-experience details.	Sprint 3
Yong Hin	Gold labels and precision / recall / F1; NLP alias fixes; 30 JDs per role.	Sprint 3-4
Ren Hang, Shanice	Check the new Login, Change Password, New Students and Student Intake pages; evidence choice when adding a skill; "decision support" notice; "At Risk" to "Needs support".	Sprint 3
Aaron	Advisor notes / review of AI results (human oversight); Career Paths API and page (FR-15); check the cost tiers of the resources (the "Free to learn" group is decided from the cost text).	Sprint 3
Not assigned	Admin System Settings (FR-16); optional CV upload; dates for workshops so they hide after the event.	Sprint 3-4
Whole team	SUS usability test; final report and demo.	Sprint 4

3.2 Still open from 18 October

Question	Status
Student number	**Done** (section 1.1).
Editing the 6 seed job roles in the Admin page	Still read-only; needs Yong Hin's agreement because the seed file rewrites them on every start.
Show how long activities took	Times are stored, not shown. Decide which option (days on the Progress page, average per resource for admins, or hours entered by students).
"Give up": delete or keep	Still deletes the activity; alternative is a `dropped` status advisors can see.
