SEAGAS - Team Update: What Is Done, What Is Left, What To Do Next

From Carl (Soh Way Miin), Backend Developer, to Group 10 | 27 October 2026
COS40005 Computing Technology Project A | POC004

In short: every student now belongs to a **course** (Computer Science, Business or ICT), and the course decides which target roles they can choose. Recommended activities now need **evidence** (a file or a link) before they can be marked complete, and advisors can open that evidence. Students enter both **GPA and CGPA** and are reminded to update them every semester. The advisor dashboard can be filtered by course. After you pull, run **start_all.bat** once.

Note: these changes were pushed straight to dev, without a pull request. Many pages and the database changed, so please look at the parts that touch your work and tell Carl about anything that looks wrong.

1. What Is Done (27 October)

1.1 Evidence for completed activities

Area	What changed
Evidence is required	On Recommendations and My Progress, **Mark Complete** opens a dialog: the student must add at least one file or link before the activity is completed (the backend checks this too). The last evidence of a completed activity cannot be deleted.
Formats	Files: PDF, JPG, PNG, Word (.docx) and PowerPoint (.pptx), max 5 MB, max 5 per item. The type is checked from the file content, not the name, and Office files with macros are refused. Videos and online work are added as **links** (http / https only).
Projects and certifications	Files and links can be added directly in the Add / Edit form.
Advisors	The student detail page shows each activity's evidence; advisors can open links and download files (downloads are recorded in the audit log).

1.2 Courses

Area	What changed
Every student has a course	`users.course` : CS, BUSINESS or ICT, required for students. The 5,000 synthetic students are split evenly (student N: N mod 3 = 1 CS, 2 Business, 0 ICT) and their programme names match.
Target roles per course	Computer Science: all 6 IT roles. ICT: Web Developer, Data Analyst, Cloud Engineer, Cybersecurity Analyst. Business: **Business Analyst, Marketing Executive, Financial Analyst, HR Executive** (new). The Profile and Job Analysis pages only list the student's roles, and the backend refuses other roles (profile and assessment). Synthetic ICT and Business students were moved to an allowed role.
Admin roles	Admin → Skills & Roles shows each role's courses; admins choose the courses when adding or editing a role.
Advisor dashboard	One row of course buttons at the top filters every tab: the overview numbers (average readiness, at risk, profiles complete), the skill-gap chart and table, and the student list.

Lists	Advisor student list, Admin User Management and the intake pages show the course and can be filtered by it.
New-student list	The upload needs a **Course** column. **Download the template** now gives an Excel file whose Course column is a drop-down list (Computer Science / Business / ICT). The welcome email includes the course.

1.3 Student profile

Area	What changed
My Details	A card at the top of My Profile shows name, student ID, course, school email, university, programme, target role and GPA / CGPA. Name, ID, course and school email are read-only.
GPA and CGPA	Two fields, both entered by the student: GPA (last semester) and CGPA (overall), 0-4.
Semester reminder	From 1 January, 1 May and 1 September, the Dashboard and My Profile show a reminder until the student either saves a new GPA / CGPA or clicks **No change this semester**. The dates are in `SEMESTER_STARTS` (`backend/routers/students.py`).
Bug fix	A new student without a profile saw an empty skill list; the profile is now created when they add their first skill.

1.4 Database and tests

Change	Why
`student_evidence_files`: `kind`, `link_url`, `progress_id`	Evidence can be a file or a link, and can belong to a recommended activity.
`users.course`	The student's course (a trigger fills it for new rows).
`job_roles.courses`	Which courses may choose the role; 4 Business roles added.
`student_profiles.cgpa`, `results_updated_at`	CGPA, and when the results were last updated (drives the reminder).

All of it is in both `schema.sql` and `migrate_existing_db.sql`; start_backend.bat applies it (also again after loading the synthetic students). New endpoints: `GET /api/intake/template`, `POST /api/students/profile/results-confirmed`, evidence links for projects, certifications and activities; `/api/jobs/roles`, `/api/advisor/cohort/overview` and `/skill-gaps` accept `?course=`. Tests: 83 pass (`python -m pytest tests -q`).

2. What To Do Next

2.1 After you pull (every member)

1. `git checkout dev`, `git pull`, then double-click **start_all.bat**. It gives every student a course, adds the Business roles and the new columns.
2. Test student (Computer Science): `student0001@synthetic.example.com`, Student ID `900000001`, password `Seagas@2026`. Business: `student0002` / `900000002`; ICT: `student0003` / `900000003` (same password).
3. Try: as a student, open a recommendation → Mark Complete → add a file or link; check the GPA / CGPA reminder on the Dashboard. As an advisor, switch the course buttons on the dashboard and open a student's evidence. As an admin, edit a role's courses.
4. Use only made-up names, files and links (NFR-05).

2.2 Before your next push

1. Pull dev first and merge it into your branch. These files changed a lot:

File	Most likely affects
`frontend/src/pages/Profile.jsx`, `Dashboard.jsx`, `JobAnalysis.jsx`, `Recommendations.jsx`, `ProgressTracking.jsx`	Ren Hang, Shanice
`frontend/src/pages/AdvisorDashboard.jsx`, `AdvisorStudentDetail.jsx`, admin pages	Aaron, Shanice
`backend/routers/students.py`, `progress.py`, `advisor.py`, `admin.py`, `intake.py`, `evidence.py`	Anyone changing the backend
`database/schema.sql`, `migrate_existing_db.sql`	Yong Hin, Carl

2. A student's target role must be one offered to their course; scripts or SQL that set target roles must follow this.
3. Anything that completes an activity must add evidence first.
4. Run the tests and `npx vite build`; push through a pull request, commit messages in English.

2.3 Known limitation

> The 4 Business roles have **no skills yet**, so Business students cannot be assessed with a role template (the role shows "skills coming soon"; pasting a job description still works). Business and ICT skills are to be added in Admin → Skills & Roles. On databases that already had assessments, Business students may still have old assessments against IT roles; these can be cleared if needed.

3. What Is Still Left

Owner	Task	When
Carl	**Send real emails** (SMTP settings in `.env`, not git; "resend email" button). Advisor report export, readiness histogram, cohort progress view; work-experience details.	Sprint 3
Yong Hin + team	**Business and ICT skills**: skill list and required skills for the 4 Business roles (and any ICT-only roles). Gold labels and precision / recall / F1; NLP alias fixes; 30 JDs per role.	Sprint 3-4
Ren Hang, Shanice	Check the new evidence dialog, My Details card, GPA / CGPA reminder and course buttons; "decision support" notice; "At Risk" to "Needs support".	Sprint 3
Aaron	Advisor notes / review of AI results (human oversight); Career Paths API and page (FR-15); check resource cost tiers.	Sprint 3
Not assigned	Admin System Settings (FR-16, could hold the semester dates); optional CV upload; workshop dates.	Sprint 3-4
Whole team	SUS usability test; final report and demo.	Sprint 4
